DIGITAL INSURANCE LAUNCH WORKSTREAM (BROKERAGECO CASE)

A hypothetical workstream result memo, in which I worked on the Bain-BrokerageCo engagement.

BAIN & COMPANY

Client Context

A leading commercial insurance brokerage faced increasing disruption from digital-native competitors and shifting customer expectations toward seamless, online-first experiences. The client's legacy operating model – fragmented systems, manual processes, and limited digital distribution – constrained growth and reduced competitiveness.

Leadership set out to build a **new digital insurance business**, with the ambition to achieve product-market fit quickly and scale across multiple lines of business.

Problem Statement

How can the **client design, validate, and launch a scalable digital insurance offering** that captures unmet demand, achieves product-market fit, and drives measurable commercial impact?

My Role (Workstream Ownership)

Owned the **customer segmentation** and **go-to-market strategy workstream**, analyzing demand drivers and informing product design, commercialization, and scaling decisions within a cross-functional Bain case team.

Approach (Detailed Execution)

- **Analyzed customer and market data** to segment users by needs, risk, and digital adoption
- Participated in ideation generating **100+ product concepts**, narrowed to **3 prioritized solutions**
- Supported **product-market fit testing** through prototype validation and customer feedback
- Developed **go-to-market strategy** (target segments, positioning, acquisition channels)
- Evaluated **marketing levers (messaging, visuals)** to optimize conversion rates
- Assessed scalability through **modular platform design and operating model alignment**

Key Insights

- Strong demand for **simple, digital-first insurance products**
- Conversion driven by **clear value proposition and optimized digital experience**
- Hybrid **digital + broker distribution model** critical for adoption
- Modular architecture required for scalable rollout

Impact

Enabled launch of a new digital insurance business within **14 months**, establishing a scalable digital presence. The offering reached **~65% of the US market** and expanded the client's addressable customer base. Narrowed 100+ concepts to **3 high-priority solutions,** identifying the most commercially viable product. Improved **customer acquisition** through conversion-optimized marketing and supported development of a modular platform for **future growth.**

Recommendations

Launch an MVP targeting high-value, digitally ready segments to drive early adoption. Implement a test-and-learn model to continuously refine product features and marketing strategy. Scale the modular platform across additional products and geographies while aligning operations to support a digital-first model.

Execution Roadmap

1. Define target segment and product strategy
2. Validate through rapid customer testing
3. Launch MVP with focused GTM
4. Scale nationally and optimize performance
