VINFAST

Carbon credits market services for VinFast

Hypothetical EV Project

VinFast – What We Know

Foundation 2017 - 2020

First True OEM in Vietnam

- 3 e-scooters
- 4 ICE models

Electrification 2021 - 2022

First OEM Globally to Fully Pivot From ICE To EV

- 1 e-bus
- 6 e-scooters

Global Expansion 2023 - 2025 and Beyond

First & Only EV OEM Of Southeast Asia Pioneering The Region's EV Dream On The Global Stage

Total Sales Since Inception

334,536 cars

537,813 e-scooters

Growing Global Footprint

381 Showrooms

5 Operating and Planned Factories

Vietnam-Singapore ITMO – Opportunities and Challenges

Singapore and Vietnam have largely finalized negotiations on an **Article 6 Implementation Agreement**, demonstrating both countries' readiness to operationalize the transfer of **correspondingly adjusted carbon credits.** This agreement aims to strengthen bilateral cooperation on climate mitigation initiatives.

Navigating Opportunities and Overcoming Challenges

Climate Action
Through carbon credit trading, Singapore can access **high-quality, correspondingly adjusted credits from Vietnam**, enabling its companies to meet emissions obligations at lower cost while supporting Vietnam's shift toward cleaner energy and sustainable development.

Green Growth Partnerships
The agreement also creates opportunities for collaboration in **green finance, clean technology, and workforce development**, helping position both countries as leaders in Southeast Asia's emerging **low-carbon economy**.

Unresolved NDC Allocation Between Countries
Another challenge concerns how the resulting emissions reductions will be **allocated between Vietnam and Singapore.** Without a clear agreement on the share of reductions counted toward each country's **Nationally Determined Contributions (NDCs)**, the credibility and transparency of ITMO transfers could be questioned, potentially delaying implementation

$19 to $41
Per Million tone CO2e
(Singapore's Article 6 carbon credit procurement price offers)

Vietnam's Updated NDC Targets

Conditional Target (international support)
- Reduction: 43.5% below BAU by 2030
- Absolute reduction: 403.7 $MtCO_2e$
- Target emissions level: 620 $MtCO_2e$/year

Unconditional Target (domestic resources)
- Reduction: 15.8% below BAU by 2030
- Absolute reduction: 146.3 $MtCO_2e$
- Target emissions level: 863 $MtCO_2e$/year

VinFast Carbon Credits Estimation

Model	Weight (Kg)	Load Capacity (Kg)	Year Produced	Number of Seats	Number Produced	Avg. Life cycle (Km)	Fuel Economy (gCO2/KM)	FE Credits
VF3	857	300	2024	5	26526	200000	45.7	49
VFe34	1536	325	2024	5	14629	200000	69.4	26
VF5	1360	325	2024	5	33971	200000	60.2	35
VF6 Base	1550	427	2024	5	9620	200000	78.8	16
VF6 Plus	1743	485	2024	5	9620	200000	82.5	13
VF7 Eco	1765	375	2024	5	3823	200000	83.8	11
VF7 Plus	2085	375	2024	5	3823	200000	92.1	3
